

SPHEROIDAL GRAPHITE CAST IRON 600/3

(BS EN 1563:1997)

Spheroidal Graphite Iron, also known as Ductile Cast Iron, is a type of cast iron that has been treated while molten with an element such as Magnesium or Cerium to induce the formation of free Graphite as nodules or spherulites. The rounded shape of the nodules creates less stress points than the flat graphite flakes found in Grey Iron, this inhibits the creation of cracks and provides enhanced ductility. This nodular graphite structure inhibits the creation of linear cracks hence the ability to withstand distortion. In addition, Ductile Iron provides a unique combination of strength, wear resistance, fatigue resistance, and toughness. Products cast using ductile iron include valves, impellers, winch drums, separator body liners, etc.

Chemical Composition

Chemical composition can be defined by the manufacturer. A typical chemical analysis of this material:

Element		%
Carbon	С	3.0 - 3.5%
Silicon	Si	2.4 - 2.8%
Maganese	Mn	0.3 - 0.5%
Magnesium	Mg	0.035 - 0.05%
Phosphorus	Р	0.03 - 0.06%
Sulphur	S	0.02 - 0.04%
Copper	Cu	0.3 - 0.40%
Iron	Fe	balance

Typical Mechanical Properties

Tensile Strength	600 MPa min.
Yield Strength	370 Mps min.
Elongation	3 % min.
Hardness	192 - 269

Comparative Specifications

Material	Country/Standards
5.3100	European Union / EN
EN-GJS-600-3	United Kingdom / B.S.
JS 350-22-LT/S	International / ISO
FCAD 600	Japan / JIS
QT600-3	China
SA-395 60-40-18	USA / ASME
